

neural image codec

Прошян Гарри Арменович М4150

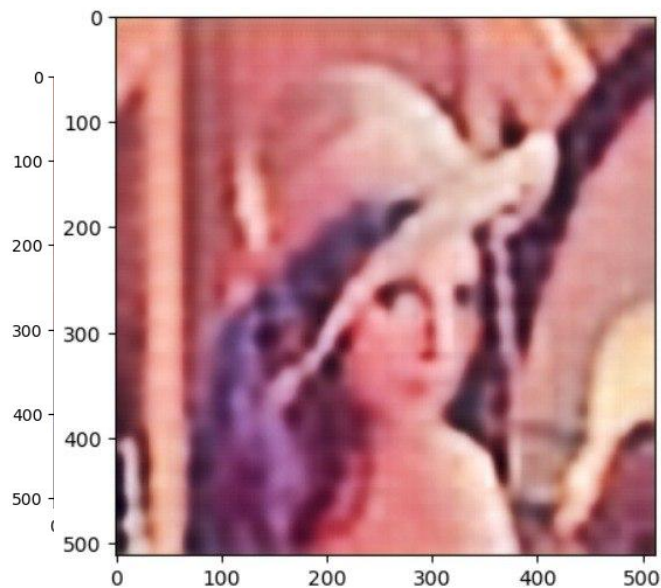

Модель

- Энкодер - все сверточные слои resnet18
- Декодер - “зеркальная версия” энкодера, состоящая из последовательности residual блоков вида:

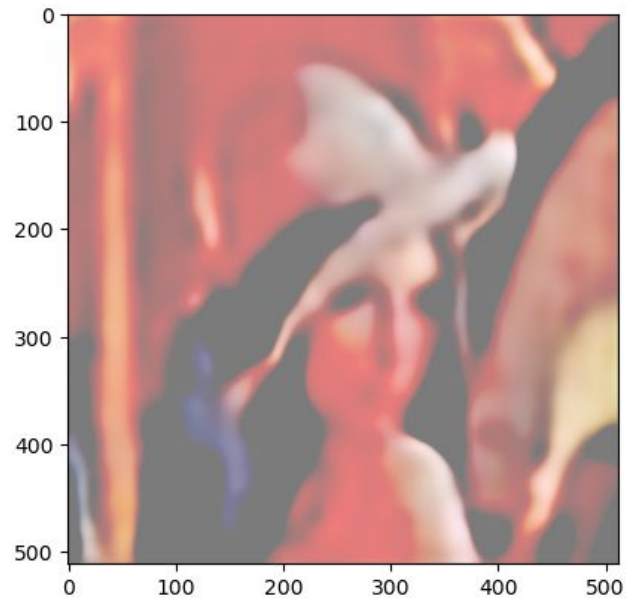

```
def forward(self, x):  
    skip_connection = self.conv_to_match_dims(x)  
    out = self.upscale(x)  
    out = self.double_conv(out)  
    out = out + skip_connection  
    return out
```

- double_conv = (Conv2d -> Batchnorm -> Relu) x2
- upscale = upsample
- conv_to_match_dims - transpose convolution

Прирост качества при residual блоках

residual decoder

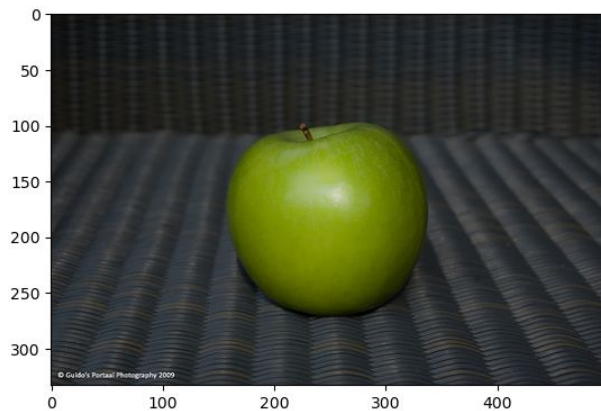

sequential decoder

Датасет

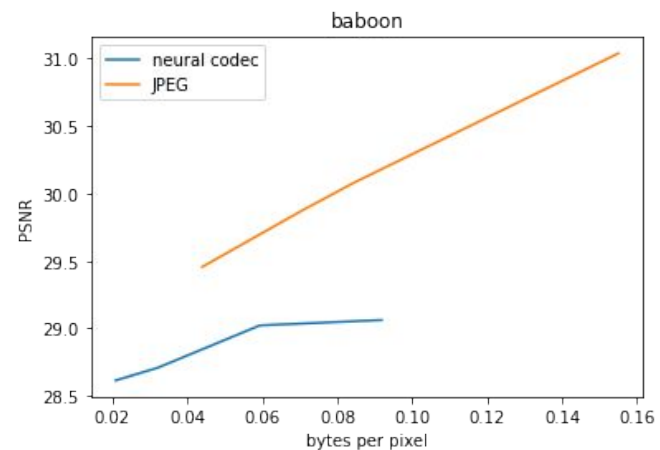

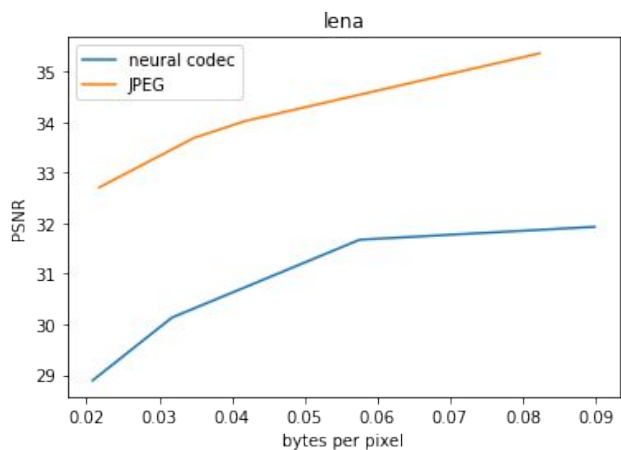

17'000 изображений из 13 классов из Imagenet:
